

## Sample Power Point slide from 'Hugh Bourne's Travelling Chest'

This is Stephenson's Rocket – a very early steam train built by Robert Stephenson in 1829.

Hugh Bourne's first train ride in 1831 would have been on a train like this.

- Hugh Bourne worked as an engineer.
- He installed steam engine pumps in mines.
- He also built an early train track in 1805 to take coal from North Staffordshire to Congleton in Cheshire.
- He wrote about his first train ride in 1831 from Manchester to Liverpool. It took 2 ¼ hours.

How long do you think it would take to travel by train from Manchester to Liverpool today?
